Introduction

Namespace SaveToolbox.Runtime.Attributes

Classes

[FieldsSelectionAttribute](#)

An attribute used by the StbCustomComponent to show a dropdown of any custom fields that can be saved.

[ReadOnlyAttribute](#)

An attribute to make a field readonly.

[StbFormerlySerializedAs](#)

An attribute to mark any serialized data fields that the namespace has changed so that the field type can be easily found again.

[UniqueGuidAttribute](#)

An attribute to give a string field a unique Guid value.
